

solar ppa

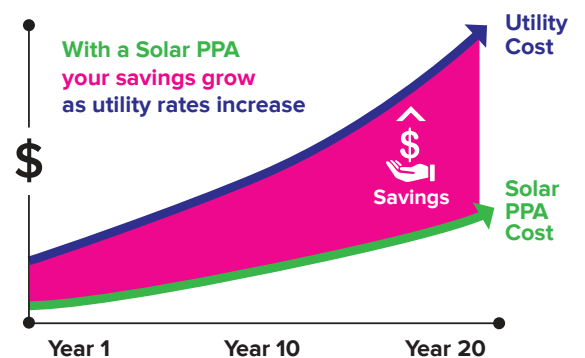

Lock in electricity costs now with no money down. Have you been wondering if solar could help lower your electricity costs? When every dollar matters, finding a way to control electricity costs can have a positive impact on your mission and bottom line. Through the Connecticut Green Bank's Solar PPA you can go solar with no money down, and receive immediate savings on your electricity.

A power purchase agreement, or PPA, allows you to purchase the electricity generated by the solar system on your building often at a significant discount to grid power. The Green Bank and its partner oversee the development and management of the system minimizing your worries.

With a PPA from the Green Bank you can:

- “Go solar” without any upfront costs or incurring any debt.
- Lock in low electricity costs and realize predictable energy production over the standard 20-year agreement term.
- See positive cash flow in year one.
- Let your customers, employees, residents, competitors, and community see that you're making a positive impact on the environment by harnessing the power of the sun.
- Rest easy knowing that a third-party owner maintains the system and manages all equipment and warranty issues.
- Have the option of purchasing the system at fair market value in the future.
- Transfer the PPA to a new building owner if you sell the property, possibly increasing the sales price of your building.

The PPA can work for all types of privately owned commercial properties (such as industrial, office, retail, multifamily, and agricultural) as well as municipal properties, schools, nonprofit organizations, faith-based institutions, recreational facilities and more.

Our PPA is offered through qualified solar contractors in your area that will help design a project tailored for your property.
