

smart-e loan

Customer Story

A conversion to propane/natural gas, and an upgrade to a high efficiency boiler gives the Watson family an expected annual savings of \$1,200.

When the Watson family discovered their boiler was cracked and leaking, and no longer providing hot water, they needed a solution before winter set in. With its low interest rate and the ability to borrow the exact amount needed to complete the project, the Smart-E Loan was an attractive solution, allowing them to install a high efficiency gas system to replace their failing one.

Location

Hamden, CT

Energy Upgrade

Conversion to propane/natural gas, upgrade to a high efficiency boiler

Financing

\$11,750 over XX years

Projected Energy Savings

\$1,200 annually

“The cost of the loan payment is less than what we are saving in monthly heating costs. We’re basically in the black from day one. The Smart-E loan was a real lifesaver.”
