Community Story

Coventry sheds light on community and clean energy

Through the Connecticut Green Bank's Solar Marketplace Assistance Program (MAP), Coventry installed solar photovoltaic systems across a wide range of town buildings.

The Solar PPA makes it easier for towns and cities to identify solar projects without the stress of managing the system. The project will provide savings to build a healthier, greener community for Coventry.

Energy Upgrade

2582.49 kW across 6 rooftops

2 carport solar photovoltaic systems at Town Hall

Police Headquarters

Radio Tower Annex

Five Board of Education Buildings

Projected Energy Savings

\$803,926 over the life of the upgrades

* With a Power Purchase Agreement (PPA) from the Green Bank you can: "Go solar" without any upfront costs or incurring any debt; Lock in low electricity costs and realize predictable energy production over the standard 20-year agreement term; and see positive cash flow in year one.

"Our community is using solar energy at town buildings including our schools, public safety buildings and our Town Hall - and the Green Bank Solar PPA has made it easy and affordable. The town is saving money, and since we're not responsible for managing and addressing system performance through the PPA, we're enjoying stress free energy production. This allows the town to set an example for our homeowners and businesses who are interested in going solar."

John Elsesser, Town Manager
